UMAIR MUJTABA

Software Engineer
Islamabad,Pakistan • 0342-4215464 • umairmujtaba123@gmail.com • linkedin.com/in/umair-mujtaba-425981181

PROFESSIONAL SUMMARY

Backend-focused Software Engineer with hands-on experience across Laravel, PHP, and CodeIgniter (2 and 4), building RESTful APIs, database-driven systems, and scalable web applications. Skilled in MySQL and PostgreSQL database design, query optimization, and system integration, with additional experience maintaining a legacy enterprise healthcare application. Proven ability to debug, refactor, and optimize backend systems for reliability and performance. Fast learner focused on clean, maintainable code and continuous improvement.

TECHNICAL SKILLS

Programming Languages: PHP (5.6 – 8.x), Python, JavaScript, HTML, CSS, SQL

Frameworks: Laravel, CodeIgniter 4, CodeIgniter 2, Frappe Framework, Core PHP

Databases: MySQL, Database Design, Query Optimization

APIs & Integrations: REST APIs, Google Maps API, Third-Party API Integration

Tools: Postman, DataTables, AJAX

Version Control: Git, GitHub

Concepts: MVC Architecture, Eloquent ORM, System Integration, Performance Optimization, Legacy Application Maintenance

PROFESSIONAL EXPERIENCE

Associate Software Engineer — Micromerger

Dec 2024 – Present

Pakistan

- Engineer scalable backend systems and RESTful APIs using Laravel, CodeIgniter 4, and Python (Frappe Framework) across multiple concurrent client projects.
- Currently maintaining and extending IDIMS, a legacy CodeIgniter 2 / Core PHP 5.6 healthcare disease-surveillance system — developing new backend features, optimizing complex MySQL queries, and resolving production issues.
- Build and maintain booking systems, admin dashboards, reporting modules, and dynamic forms for multiple production applications.
- Design and optimize MySQL and PostgreSQL databases to improve query performance, reliability, and scalability.
- Collaborate with frontend engineering teams (React) to deliver cohesive, API-driven applications.

PHPDeveloper — Lala Group of Companies

Jun 2024 – Dec 2024

Pakistan

- Developed and maintained backend functionality for web applications using PHP, ensuring scalability and reliability.
- Designed and optimized database structures and queries to improve performance and data integrity.
- Built and integrated RESTful APIs enabling internal and external system communication.
- Developed modules for data processing, reporting, and business workflow automation.
- Implemented error handling, input validation, and secure coding practices to strengthen application reliability.

LaravelIntern — Reax

Mar 2024 – Jun 2024

Remote

- Assisted in developing backend modules using Laravel and Eloquent ORM.
- Implemented REST APIs and integrated them with frontend components.
- Contributed to database design, query writing, and optimization using MySQL.
- Gained hands-on experience with Laravel controllers, middleware, and service-oriented architecture.

KEY PROJECTS

IDIMS — Integrated Diseases Information Management System
2026 – Present

Technologies:CodeIgniter2, Core PHP 5.6, MySQL

– Legacy healthcare system supporting disease surveillance and health information workflows for a public health organization.

– Maintain and extend legacy modules, develop new backend features, and optimize complex MySQL queries for reporting and data management.

– Resolve production issues and improve system performance while preserving existing healthcare workflows.

SMC/ZD Tracker
2026 – Present

Technologies:Djano, FastApi, Python, Postgres

- Architected backend REST APIs using FastAPI and Django for the SMC Zero Dose Tracker, enabling real-time ingestion and reporting of child immunization records.
- Designed and optimized PostgreSQL schemas, writing efficient aggregation queries and indexing strategies to power analytical dashboard metrics with low latency.
- Implemented data validation and synchronization pipelines to ensure high-accuracy tracking and reliable record-keeping across district-level health operations.

HMC — Inventory & Contract Booking System
2024

Technologies:Laravel,MySQL,GoogleMapsAPI

- Built a comprehensive inventory and contract booking platform with end-to-end backend APIs, cron jobs, and automation workflows.
- Integrated Google Maps and smart contract signing functionality.
- Automated customer notifications via Laravel Notifications and email.

DTB — Booking System
2024

Technologies:Laravel,MySQL

- Developed a booking system tailored to project-specific requirements, including backend modules, database integrations, and cron jobs.
- Ensured real-time synchronization across multiple connected systems.

KP CPMIS Helpline
2024

Technologies:CodeIgniter4, MySQL

- Built a helpline management system with dynamic forms, reporting modules, and dashboards.
- Improved data management and reporting efficiency for helpline operations.

Primero
2024

Technologies:Rubyon Rails, React, Frappe, Python

- Provided backend integration and support for Ruby on Rails and React systems.
- Integrated Frappe dashboards, configured user permissions, and supported CPMIS dashboard integration.
- Developed Frappe application reporting modules and supported data management workflows using Python and React.

EDUCATION

Bachelor of Science in Computer Science — Bahria University
2020 – 2024

Islamabad, Pakistan

ACHIEVEMENTS

ConvoBot — Automated Call Center Bot

Built an automated call center bot in Python that streamlined customer interactions and improved response times.
